

## Making extensions and profiles

hands-on session

Jonas Jäderberg

# Use case 1

- Define profile containing information about Datex User forum
    - Address
    - Number of participants
    - Type “datex userforum”
    - Link to App
  - Result
    - UML model
    - XML Schema
    - Data Dictionary
    - Selection file
- 
- The diagram consists of three white arrows pointing from the profile information to the results. A white curly bracket on the left groups the profile information items. The arrows point to the following results:
- Extension of PublicEvent
  - Extension of publicEventTypeEnum
  - Reuse UrlLink class

DATEX II

# Use case 2

- Define profile, Situation Publication Accidents only
- Result
  - XML Schema
  - Data Dictionary
  - Selection file
